South Tangerang, Indonesia

Frontend Engineer with 3+ years of experience building scalable React applications with JavaScript and TypeScript, configurable internal tools, and performance-critical UI systems. Re-engineered legacy codebases to reduce bundle size by 90%, enabled responsive interactions across 80K+ records, and built page builders, form customizers, and editor tooling that reduced repetitive frontend work

Work Experience

PT Indodev Niaga Internet - South Tangerang, Indonesia

Feb 2023 - Present

Frontend Engineer

- Built a configurable Page Builder from scratch with React and Craft.js, supporting drag-and-drop composition, nested layouts, responsive settings, live preview, component configuration, undo/redo, and API-based save/load workflows.
- Integrated internal framework components and a broad set of Ant Design v4 components into the Page Builder, collaborating with backend and design teams to enable implementation teams to configure client-facing pages without writing frontend code.
- Rebuilt an internal Chatbot Widget in React, reducing bundle size by approximately 90% from 2.5 MB to 244 KB while adding offline handling and automatic reconnection.
- Extended Ant Design Transfer v4 using React and TypeScript with drag-select, shift-click, and double-click actions; optimized lookups with Map and Set and stabilized rendering to maintain responsive interactions with more than 80,000 records.
- Built a GUI-based Form Customizer for more than 20 field types, reducing repetitive frontend changes and improving input responsiveness by replacing broad Form.useWatch subscriptions with localized React state.
- Migrated legacy Quill and SunEditor implementations to a custom Tiptap editor built on ProseMirror, and developed a dependency-free Markdown Editor with consistent JSX rendering, cursor preservation, and native undo/redo.
- Designed and delivered 6 hands-on JavaScript and React training sessions for groups of 3–7 new hires, developers, implementation team members, and interns through live coding, exercises, and guided data-fetching mini-projects.
- Adopted agentic AI workflows for requirements analysis, solution planning, frontend implementation, debugging, and code review, accelerating delivery while retaining ownership of technical decisions and production readiness

PT Indodev Niaga Internet - South Tangerang, Indonesia

Aug 2022 - Feb 2023

Frontend Engineer Intern

- Improved Ant Design table sorting to provide clearer and more consistent data presentation.
- Refactored legacy React class components into functional components, improving page performance by approximately 10%.

Education

Padang State Polytechnic - Padang, Indonesia

Jul 2019 - Dec 2023

Bachelor of Applied Science in Software Engineering, 3.77/4.00

- Built a full-stack decision support system using React, Express, and MySQL, implementing AHP and EDAS for thesis-supervisor ranking and the Winnowing algorithm for proposal-to-research text similarity analysis.

Skills

- **Programming Languages:** JavaScript, TypeScript.
- **Frontend Technologies:** React, HTML5, CSS3, Ant Design, Tailwind CSS, Styled Components, LESS.
- **Libraries & State Management:** Zustand, Craft.js, Tiptap, ProseMirror.
- **Development Tools:** Vite, Git, Chrome DevTools, React DevTools, Madge.
- **Core Strengths:** Frontend Performance Optimization, Responsive Web Design, Reusable Component Architecture.
- **API & Data Integration:** REST API integration, asynchronous data fetching, Promises, async/await, error handling, data transformation.
- **AI-Assisted Engineering:** Agentic development workflows, solution planning, code review, debugging, and documentation.
